wire and remove the basket for
cleaning.

**2mm trough
Fully welded spigot
Welded end caps**

Wedge Wire Profile

Wedge shaped wire designed to reduce
the possibility of clogging or blocking.
Wedge wire grating also has a high flow
characteristic making it ideal for drainage
and wash-down areas. It also provides a
substantial clear opening in ratio to the
overall surface area of the grate.

Wedge wire's slimline appearance
compliments any application, is resistant to
the elements and provides a long lasting
drainage solution.

All grates are available in 316, 304 and
Electropolish.
